

The AI-Powered SaaS Operating System

The AI-Powered SaaS Operating System

Production-ready SaaS foundations,
AI-powered workflows, and business
automation systems.

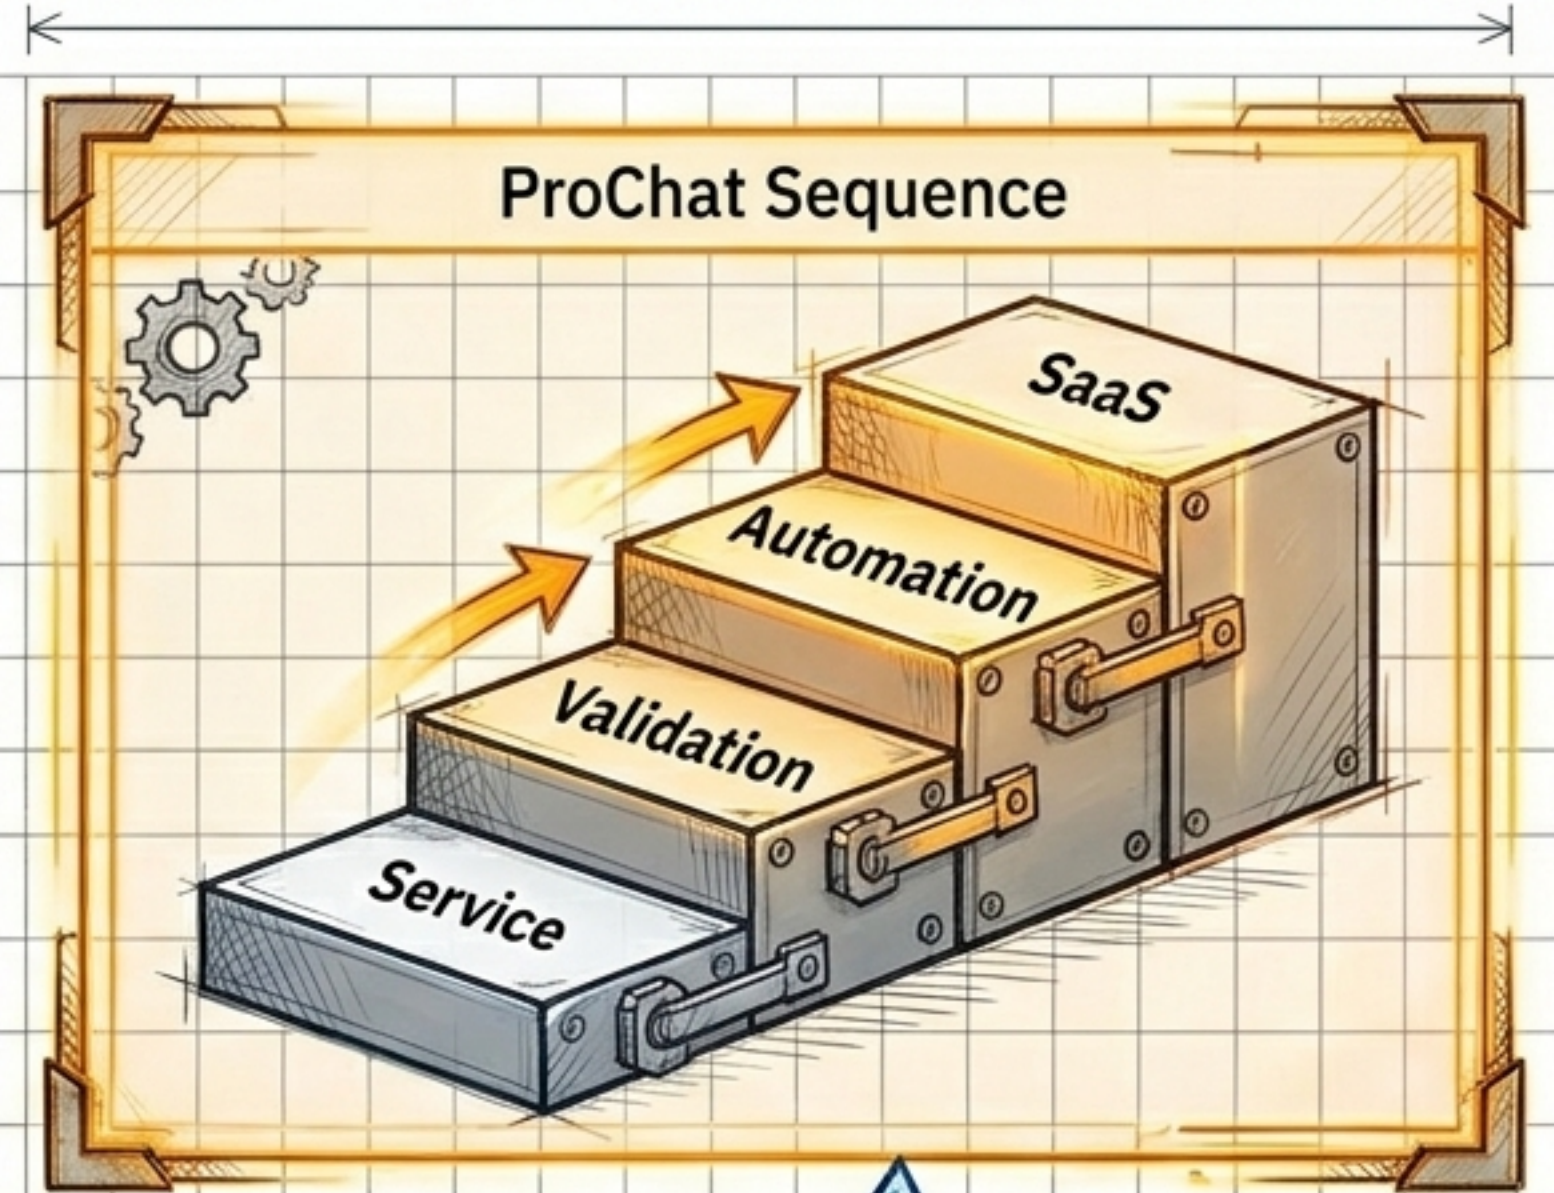

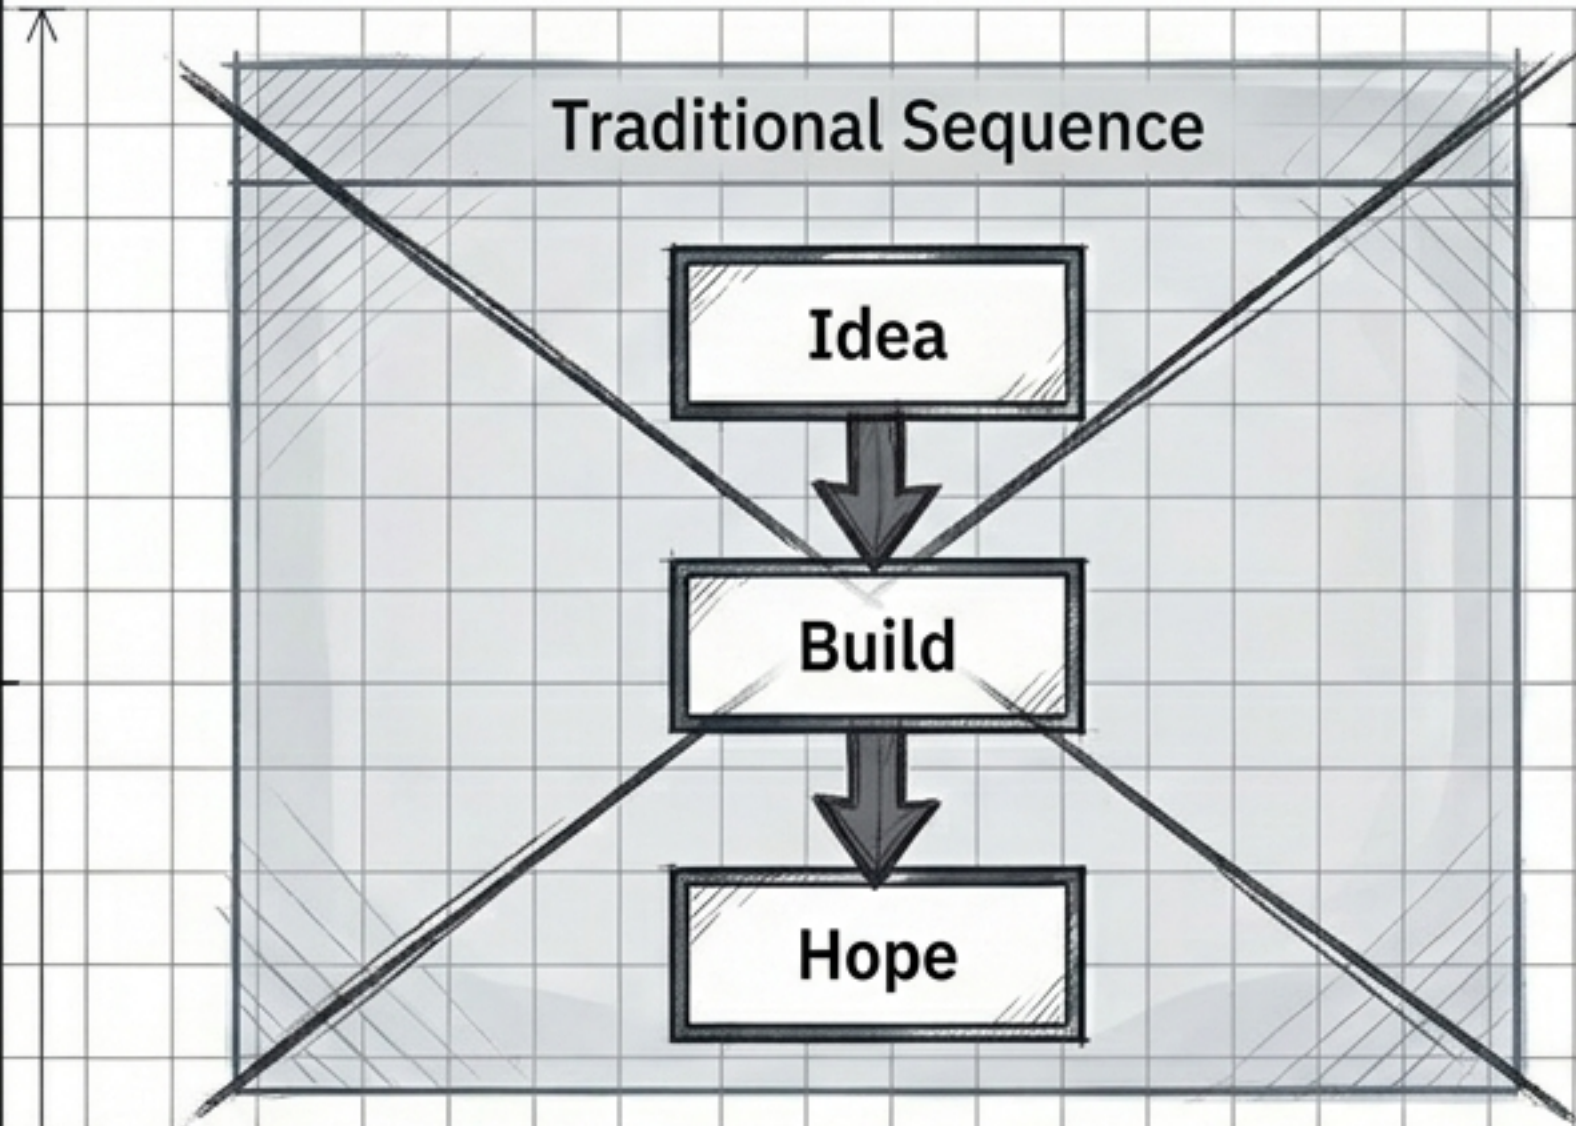

The Problem

The Burn Cycle

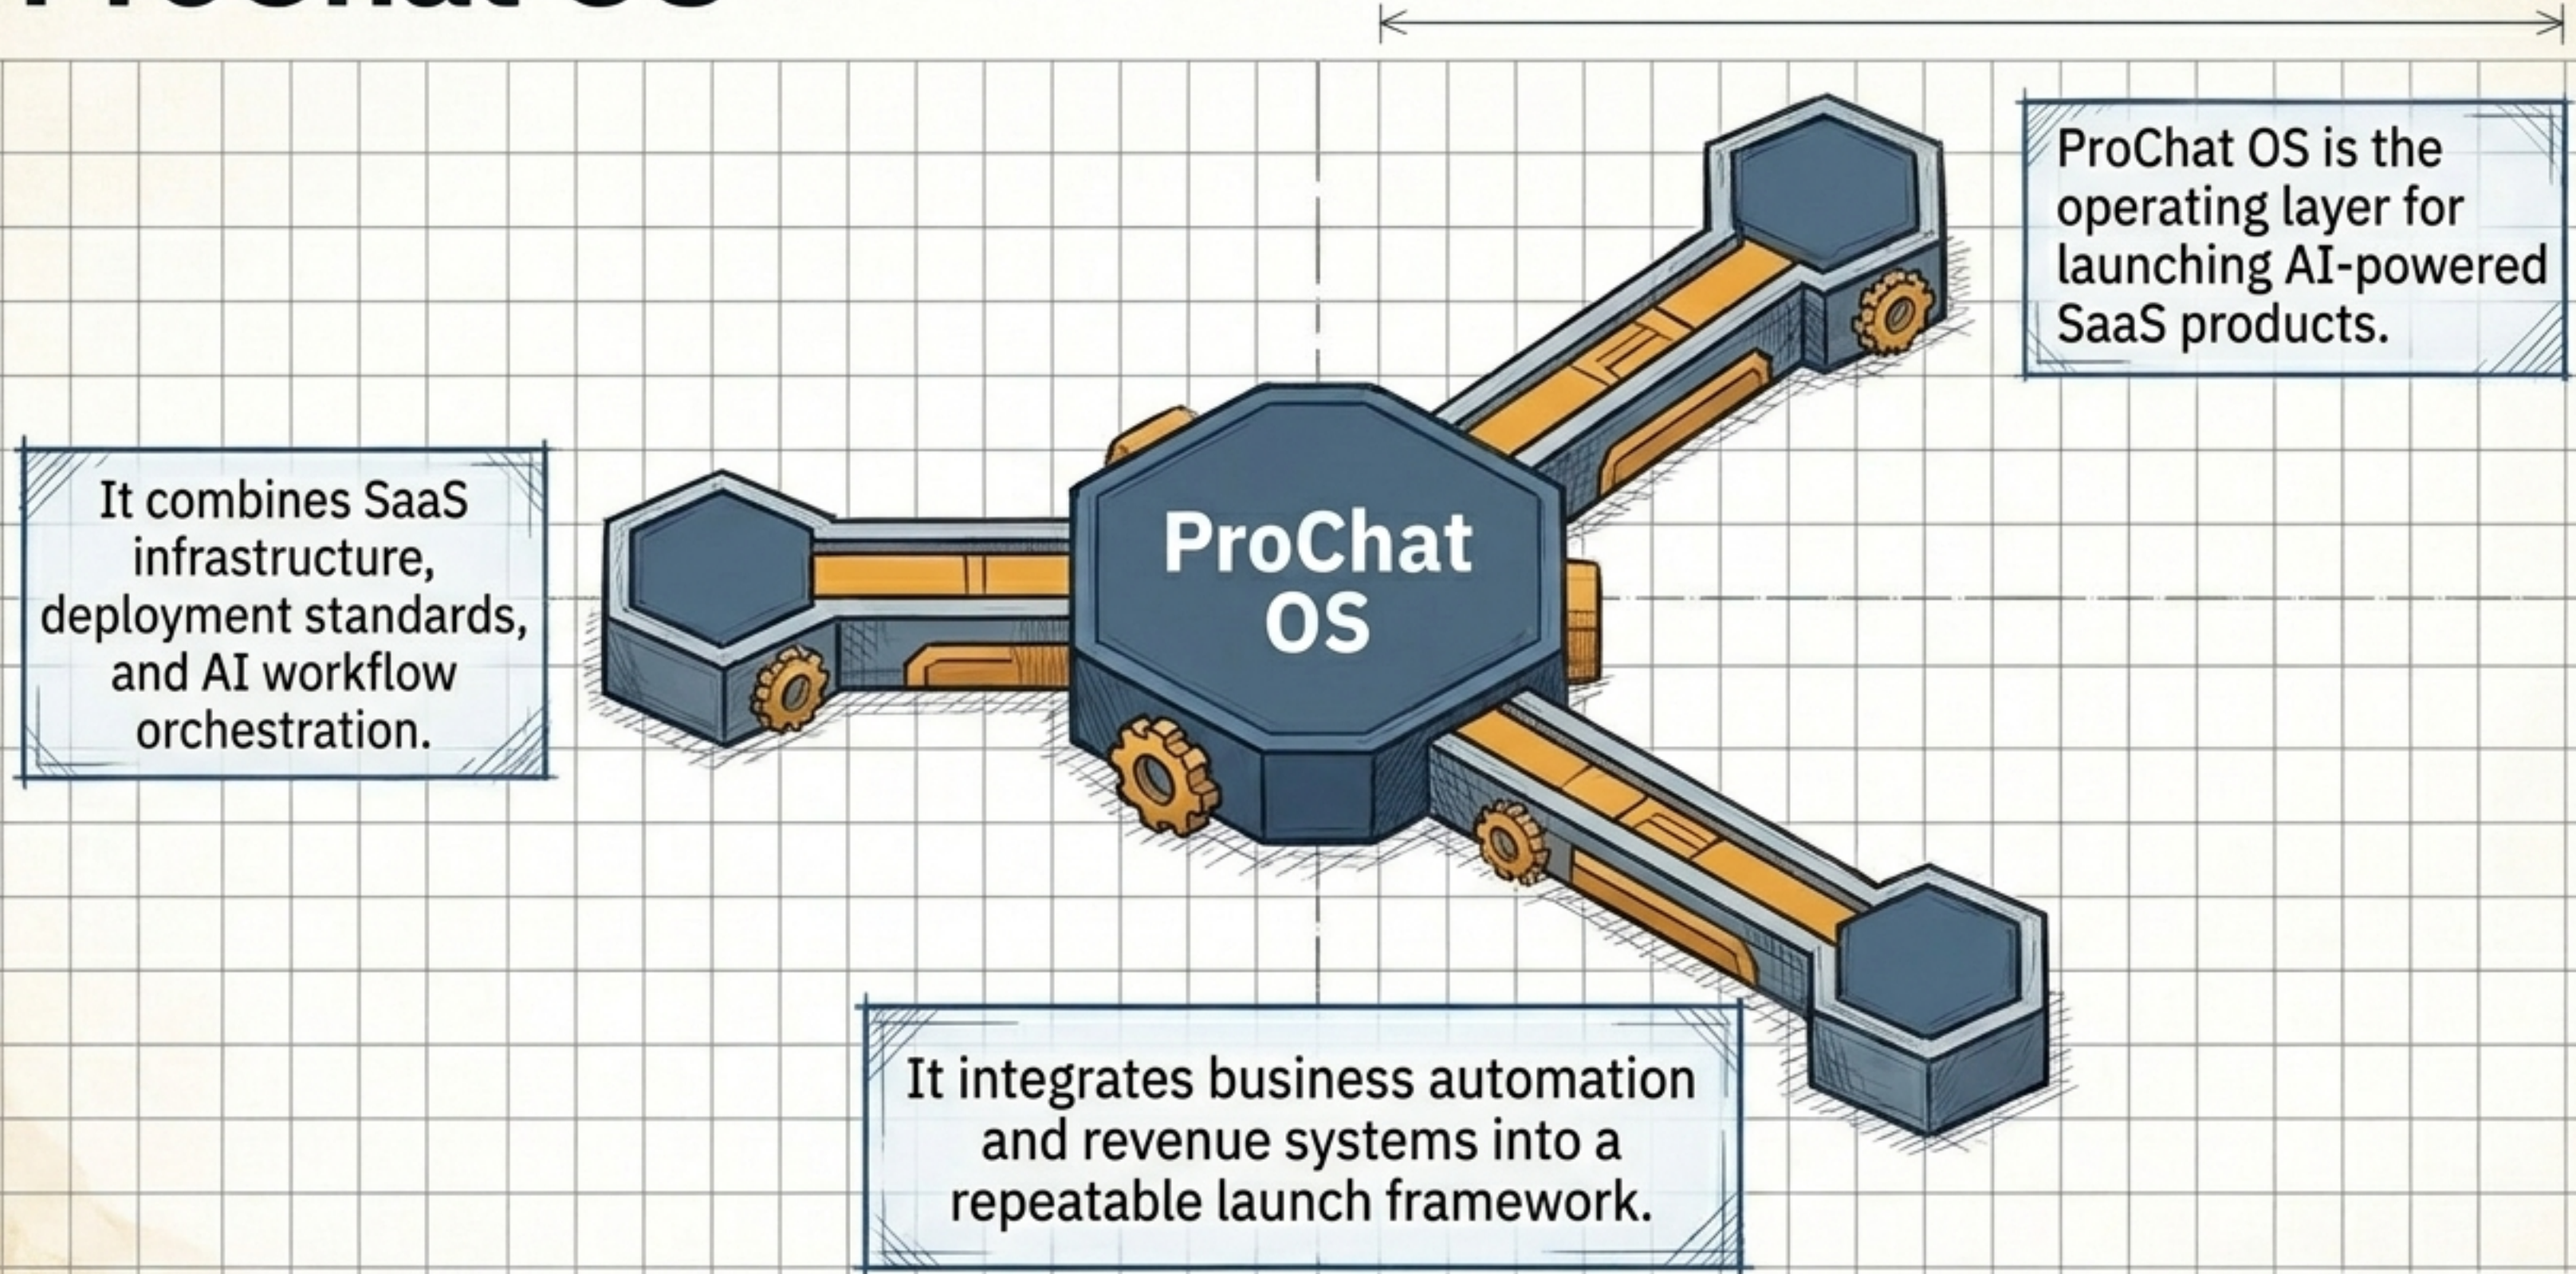

- Most SaaS products fail because they are built before demand is proven.
- Founders waste engineering effort, infrastructure spend, and months of development.
- Building features customers never pay for creates a cycle of speculative engineering and failed launches.

The Solution

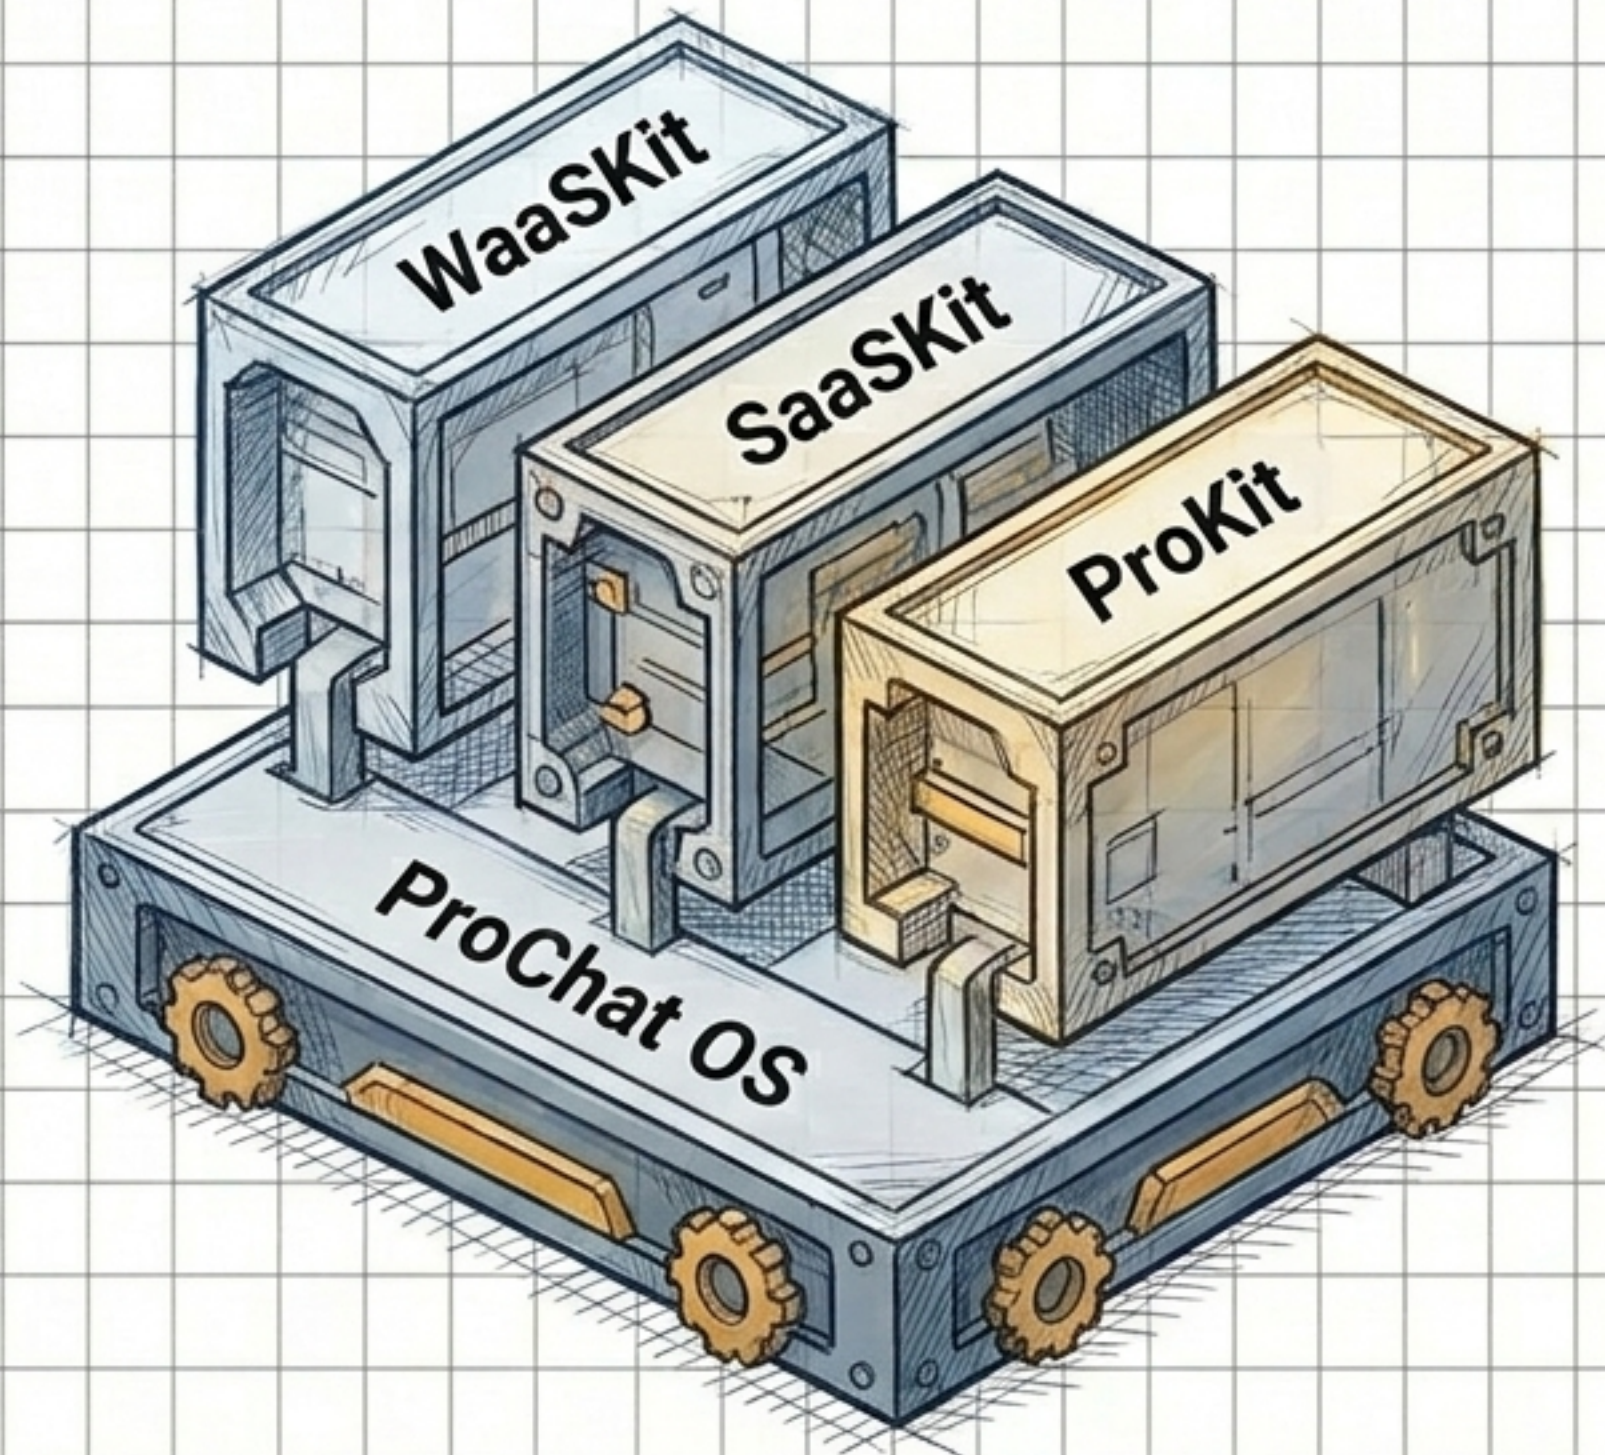

ProChat reverses the traditional sequence (Idea -> Build -> Hope).
We use: Service -> Validation -> Automation -> SaaS.
Every product begins with validated customer demand.

ProChat OS

Product Ecosystem

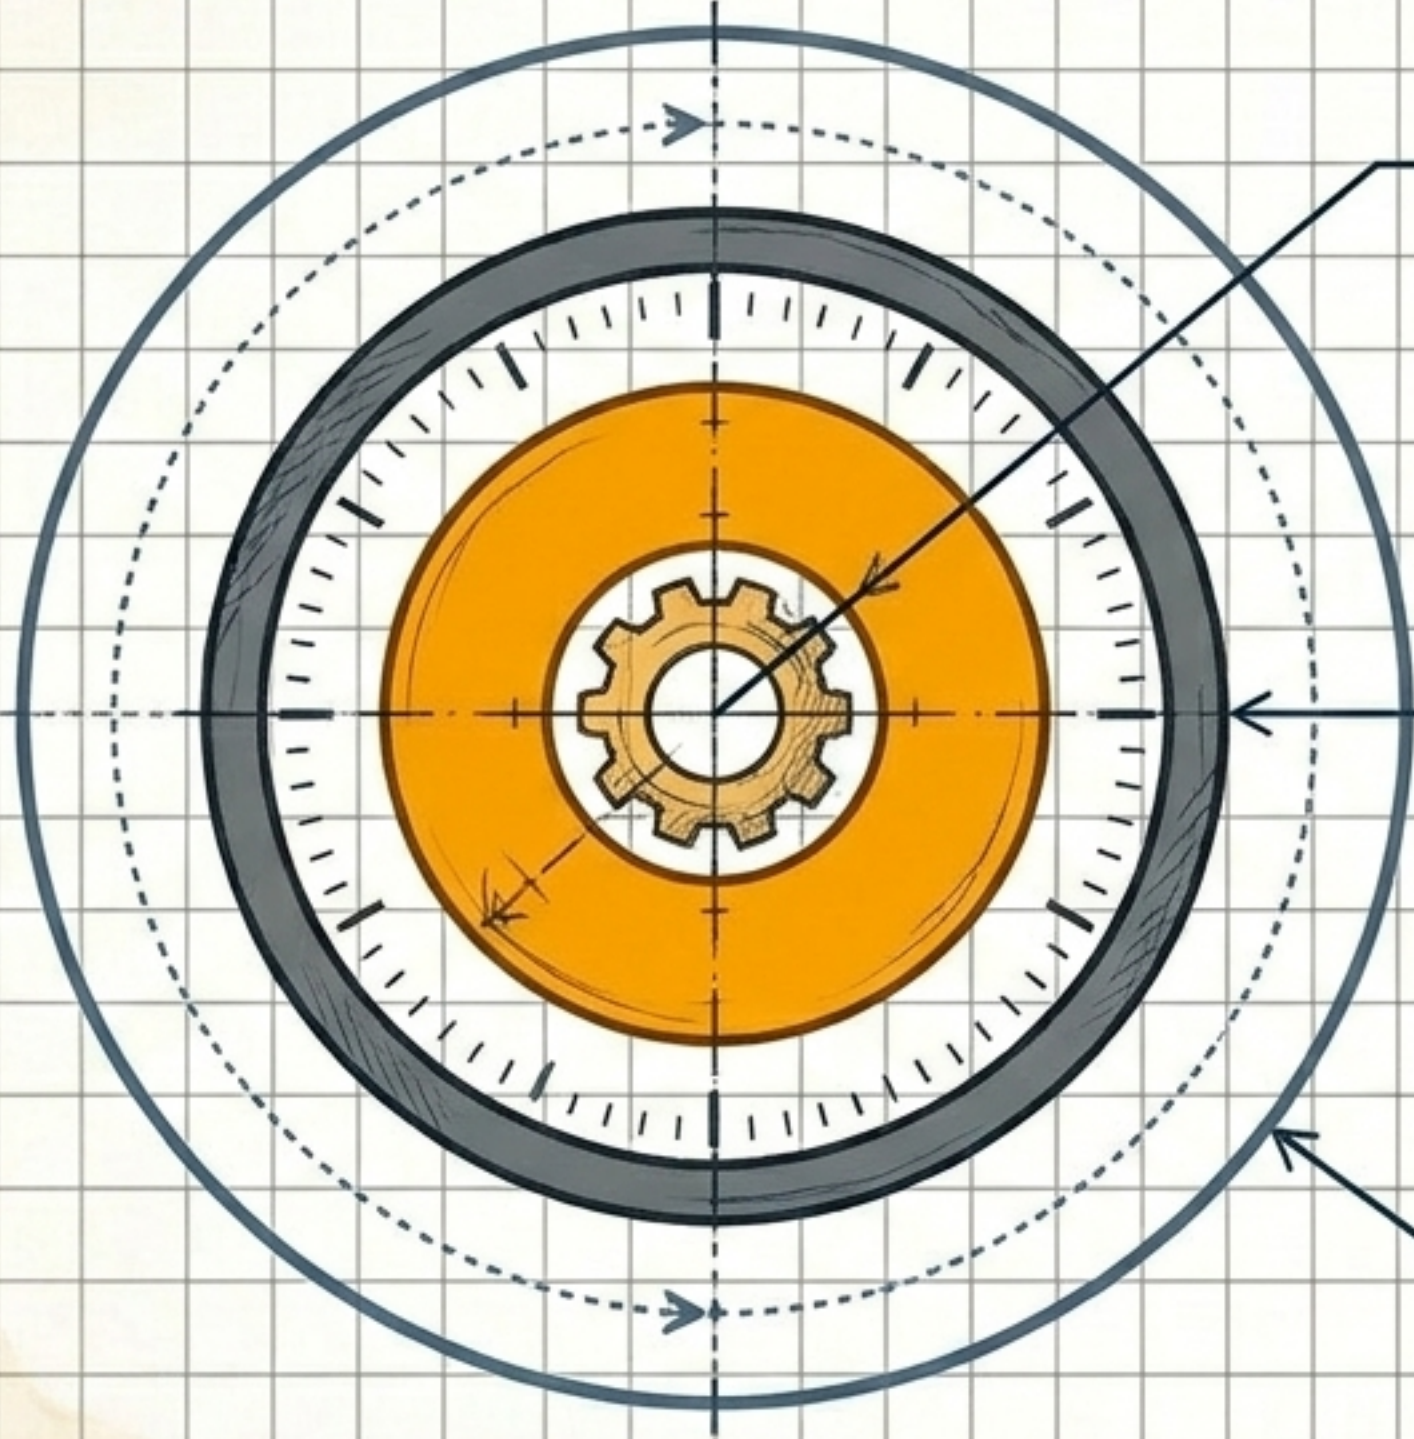

WaaSKit: Validation and discovery pathway.

SaaSKit: Launch framework for validated MVPs.

ProKit: Production-ready SaaS engine.

ProChat OS: Operating layer connecting infrastructure, workflows, and AI systems.

Target Customers

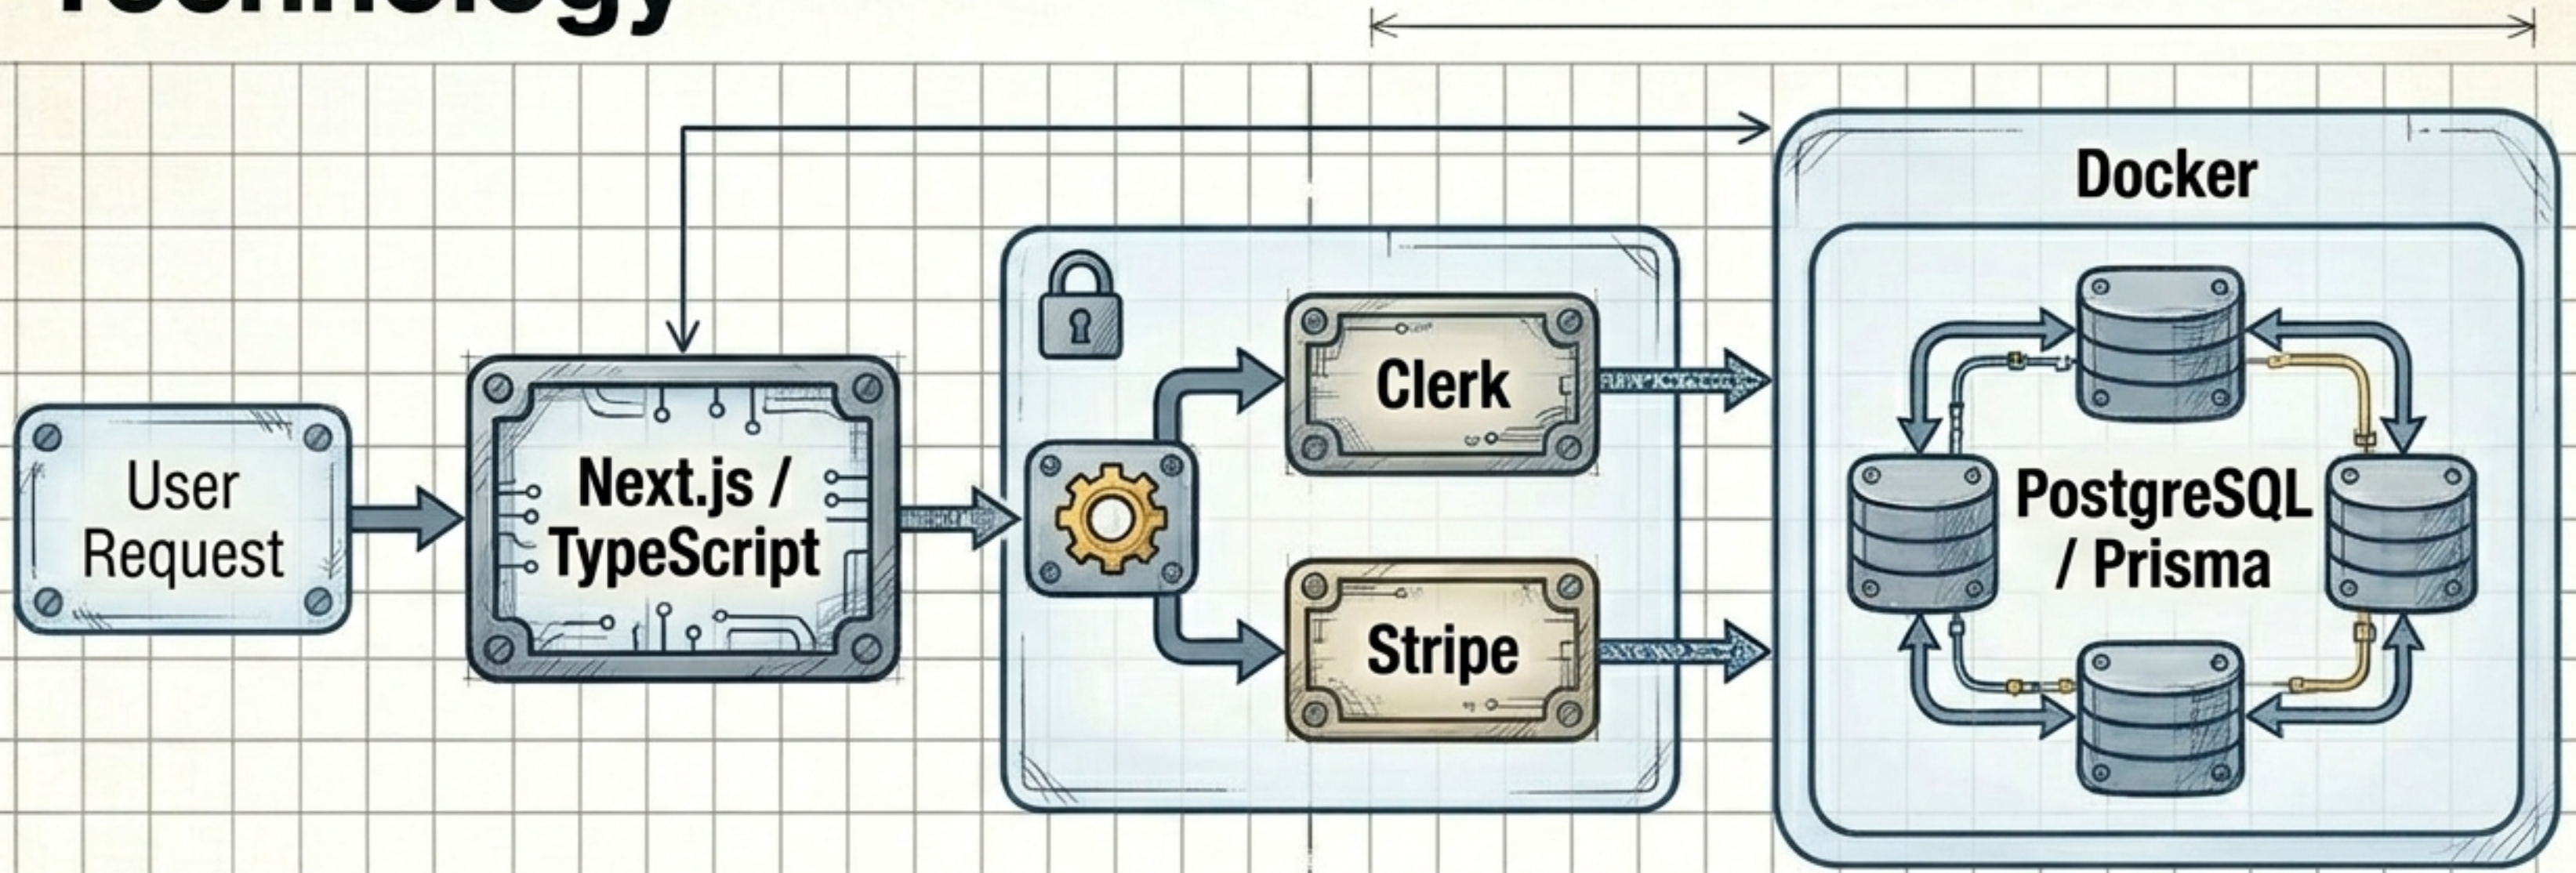

Primary: Non-technical founders, solo operators, and indie hackers.

Secondary: Consultants, accountants, agencies, and small businesses.

Future: Vertical AI builders and domain-specific SaaS operators.

Technology

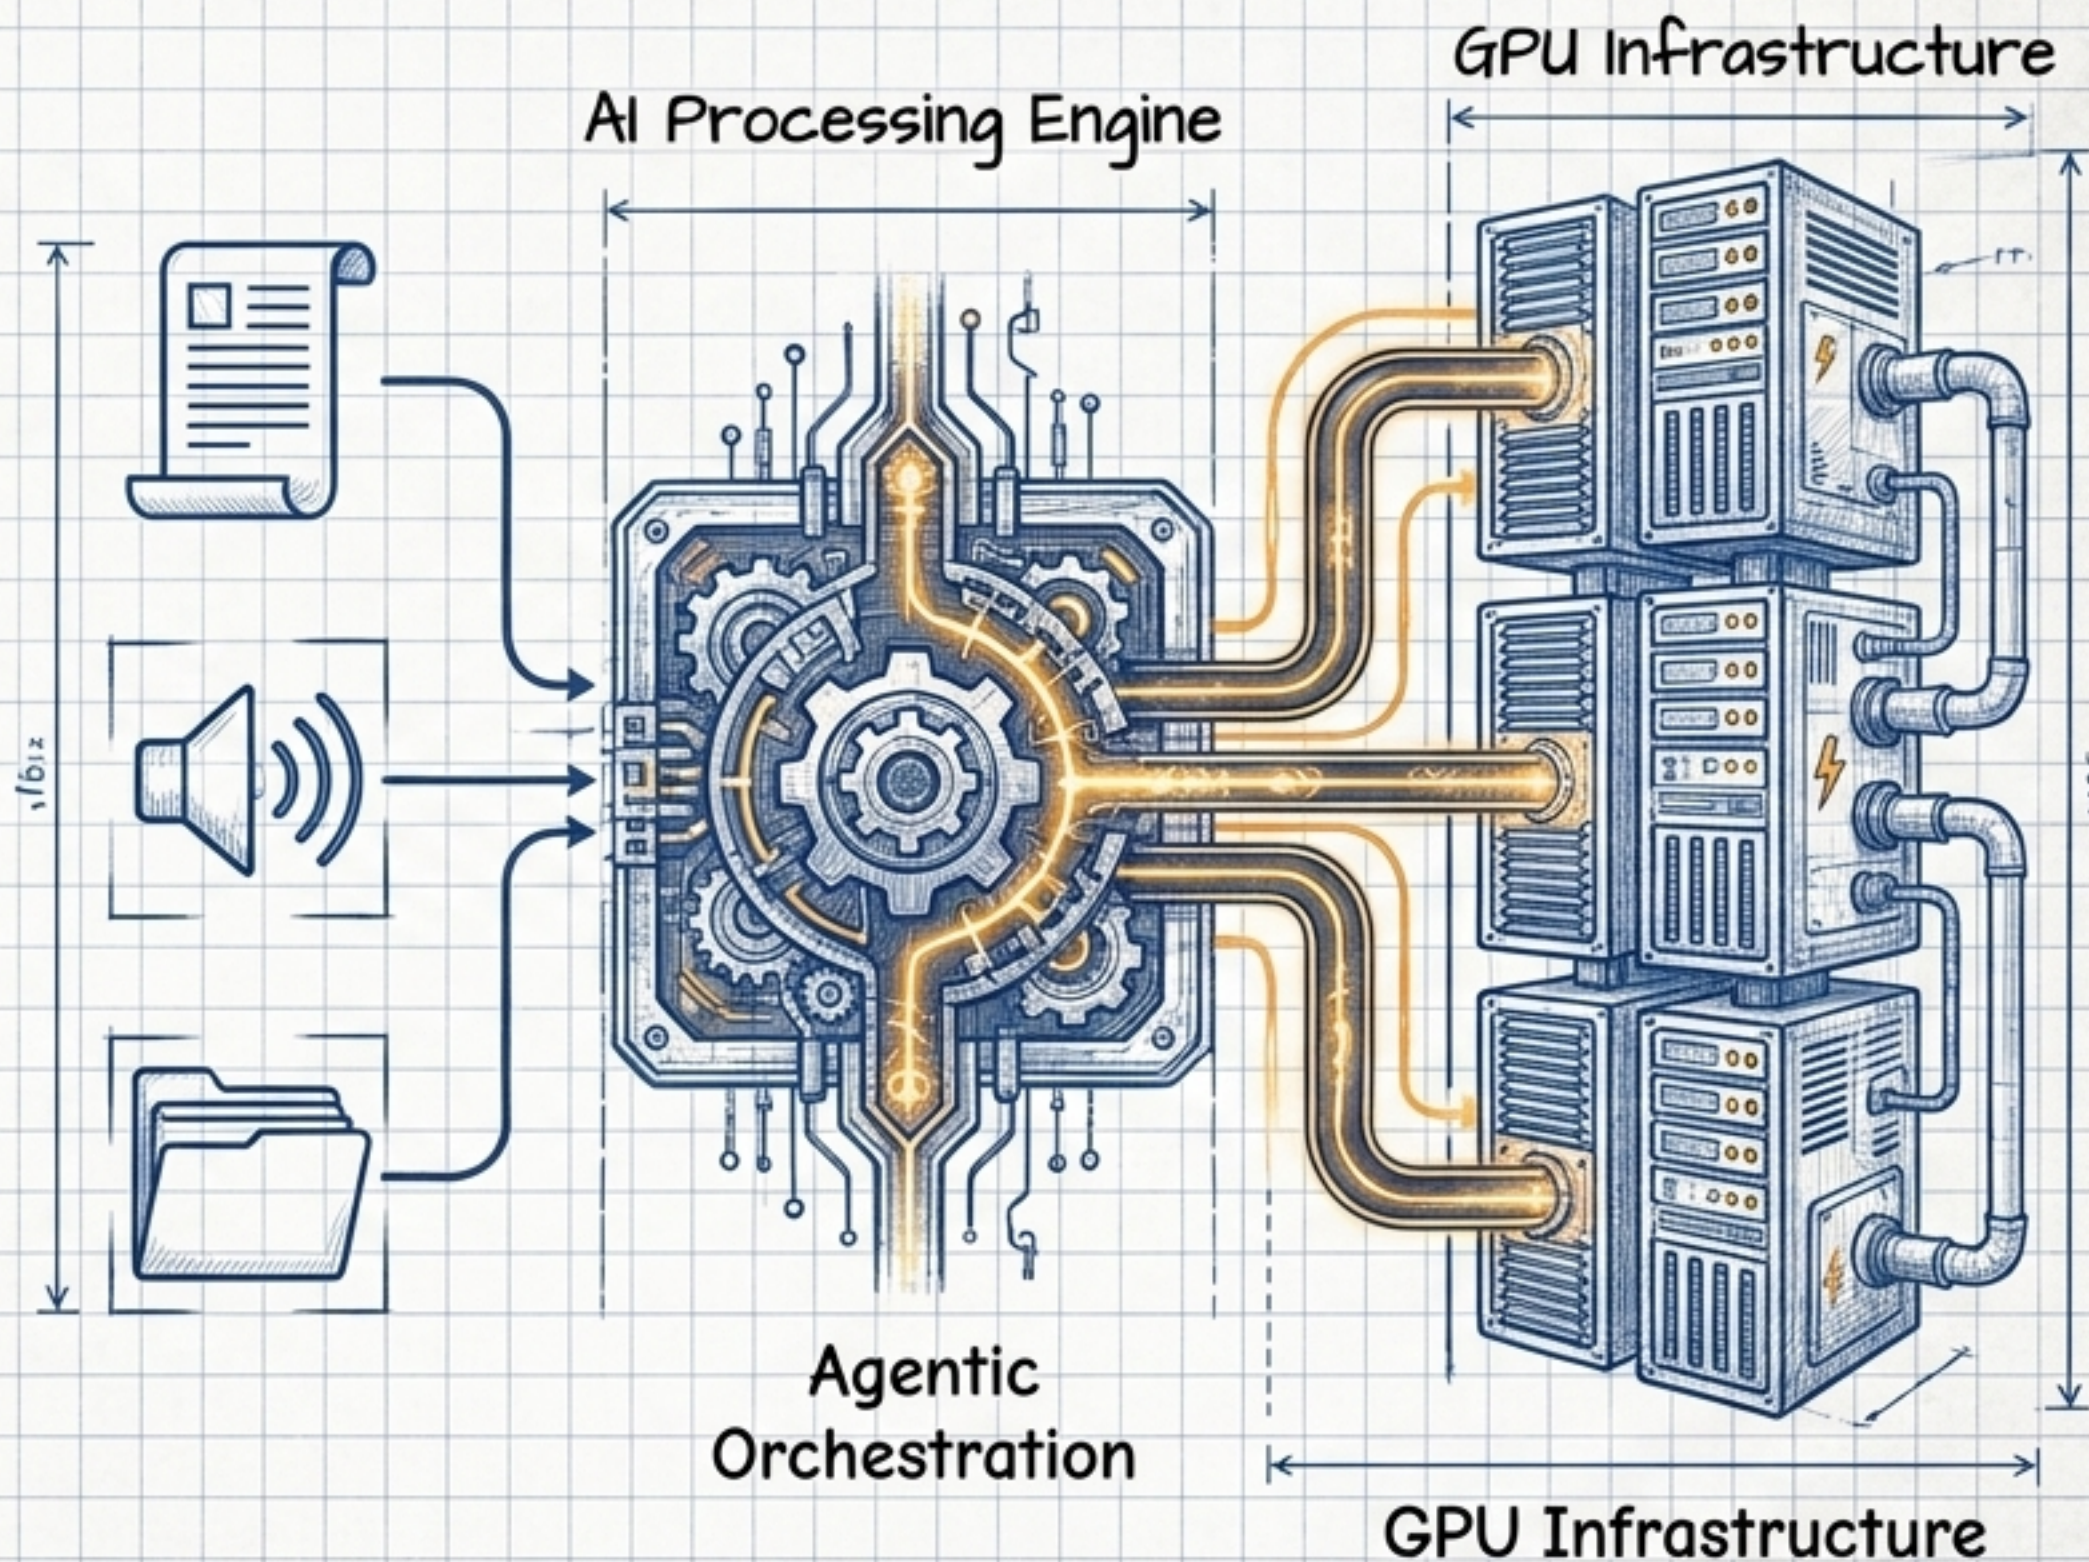

Stack: Next.js, TypeScript, PostgreSQL, Prisma, Docker, Clerk, Stripe.
Provider-agnostic architecture designed for scalable SaaS deployment and AI integration.

AI Strategy

Current and intended workloads:
Content/video/audio generation,
transcription, and document
processing.

Orchestrating agentic workflows
and business copilots.

GPU infrastructure enables
high-performance inference and
open-source model deployment.

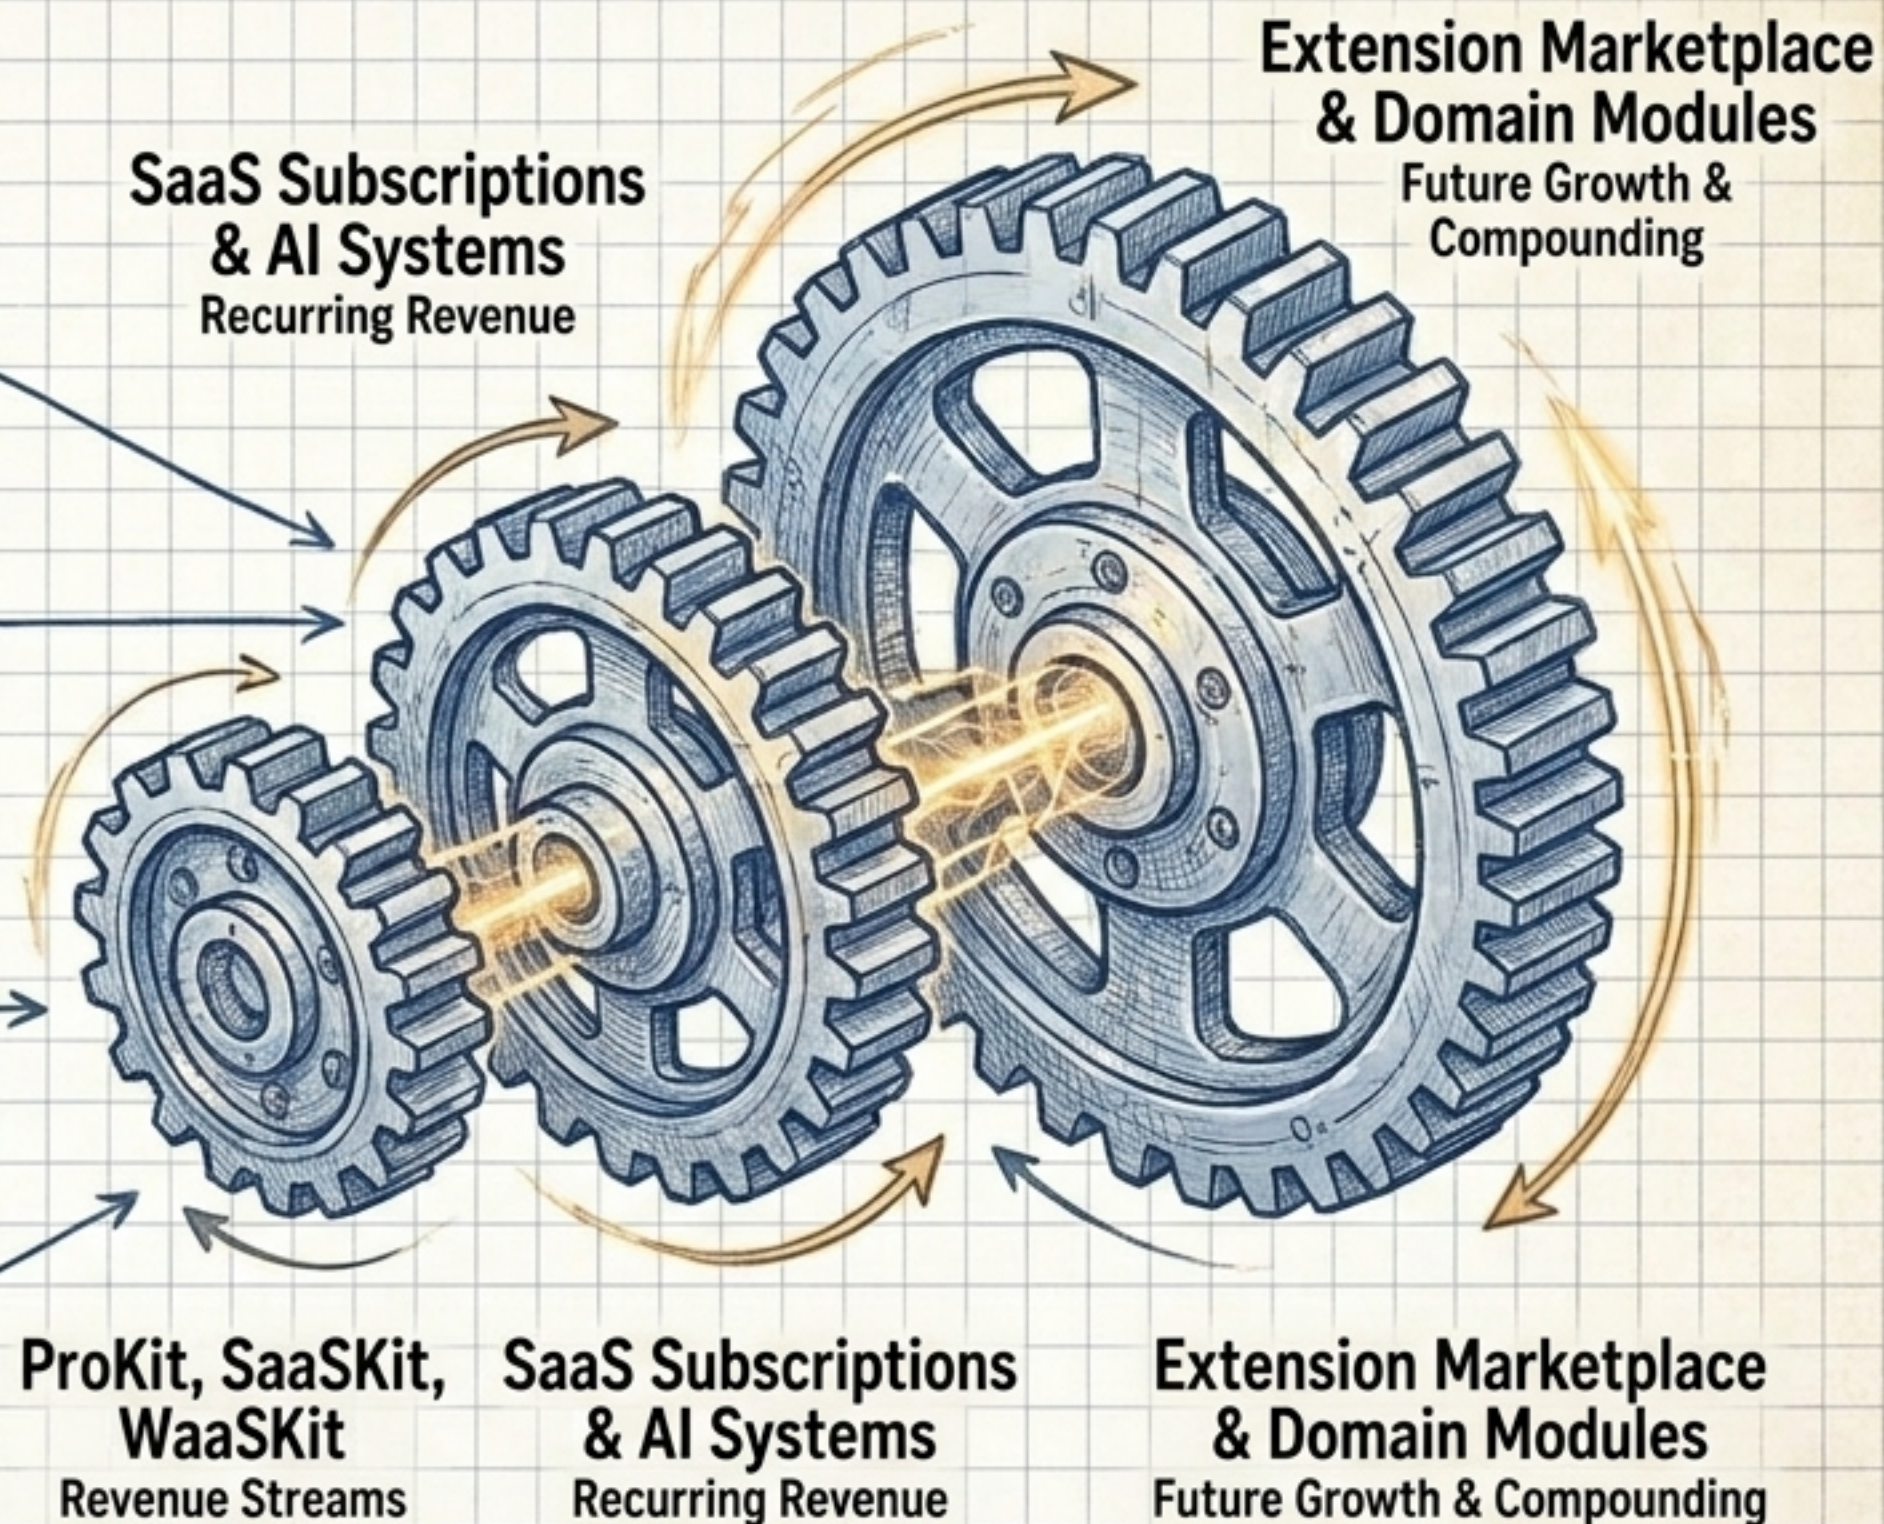

Business Model

Revenue Streams: ProKit, SaaSKit, and WaaSKit licenses.

SaaS subscriptions and recurring AI workflow systems revenue.

Future extension marketplace for domain-specific modules.

Goal: Transform validated business friction into recurring software revenue.

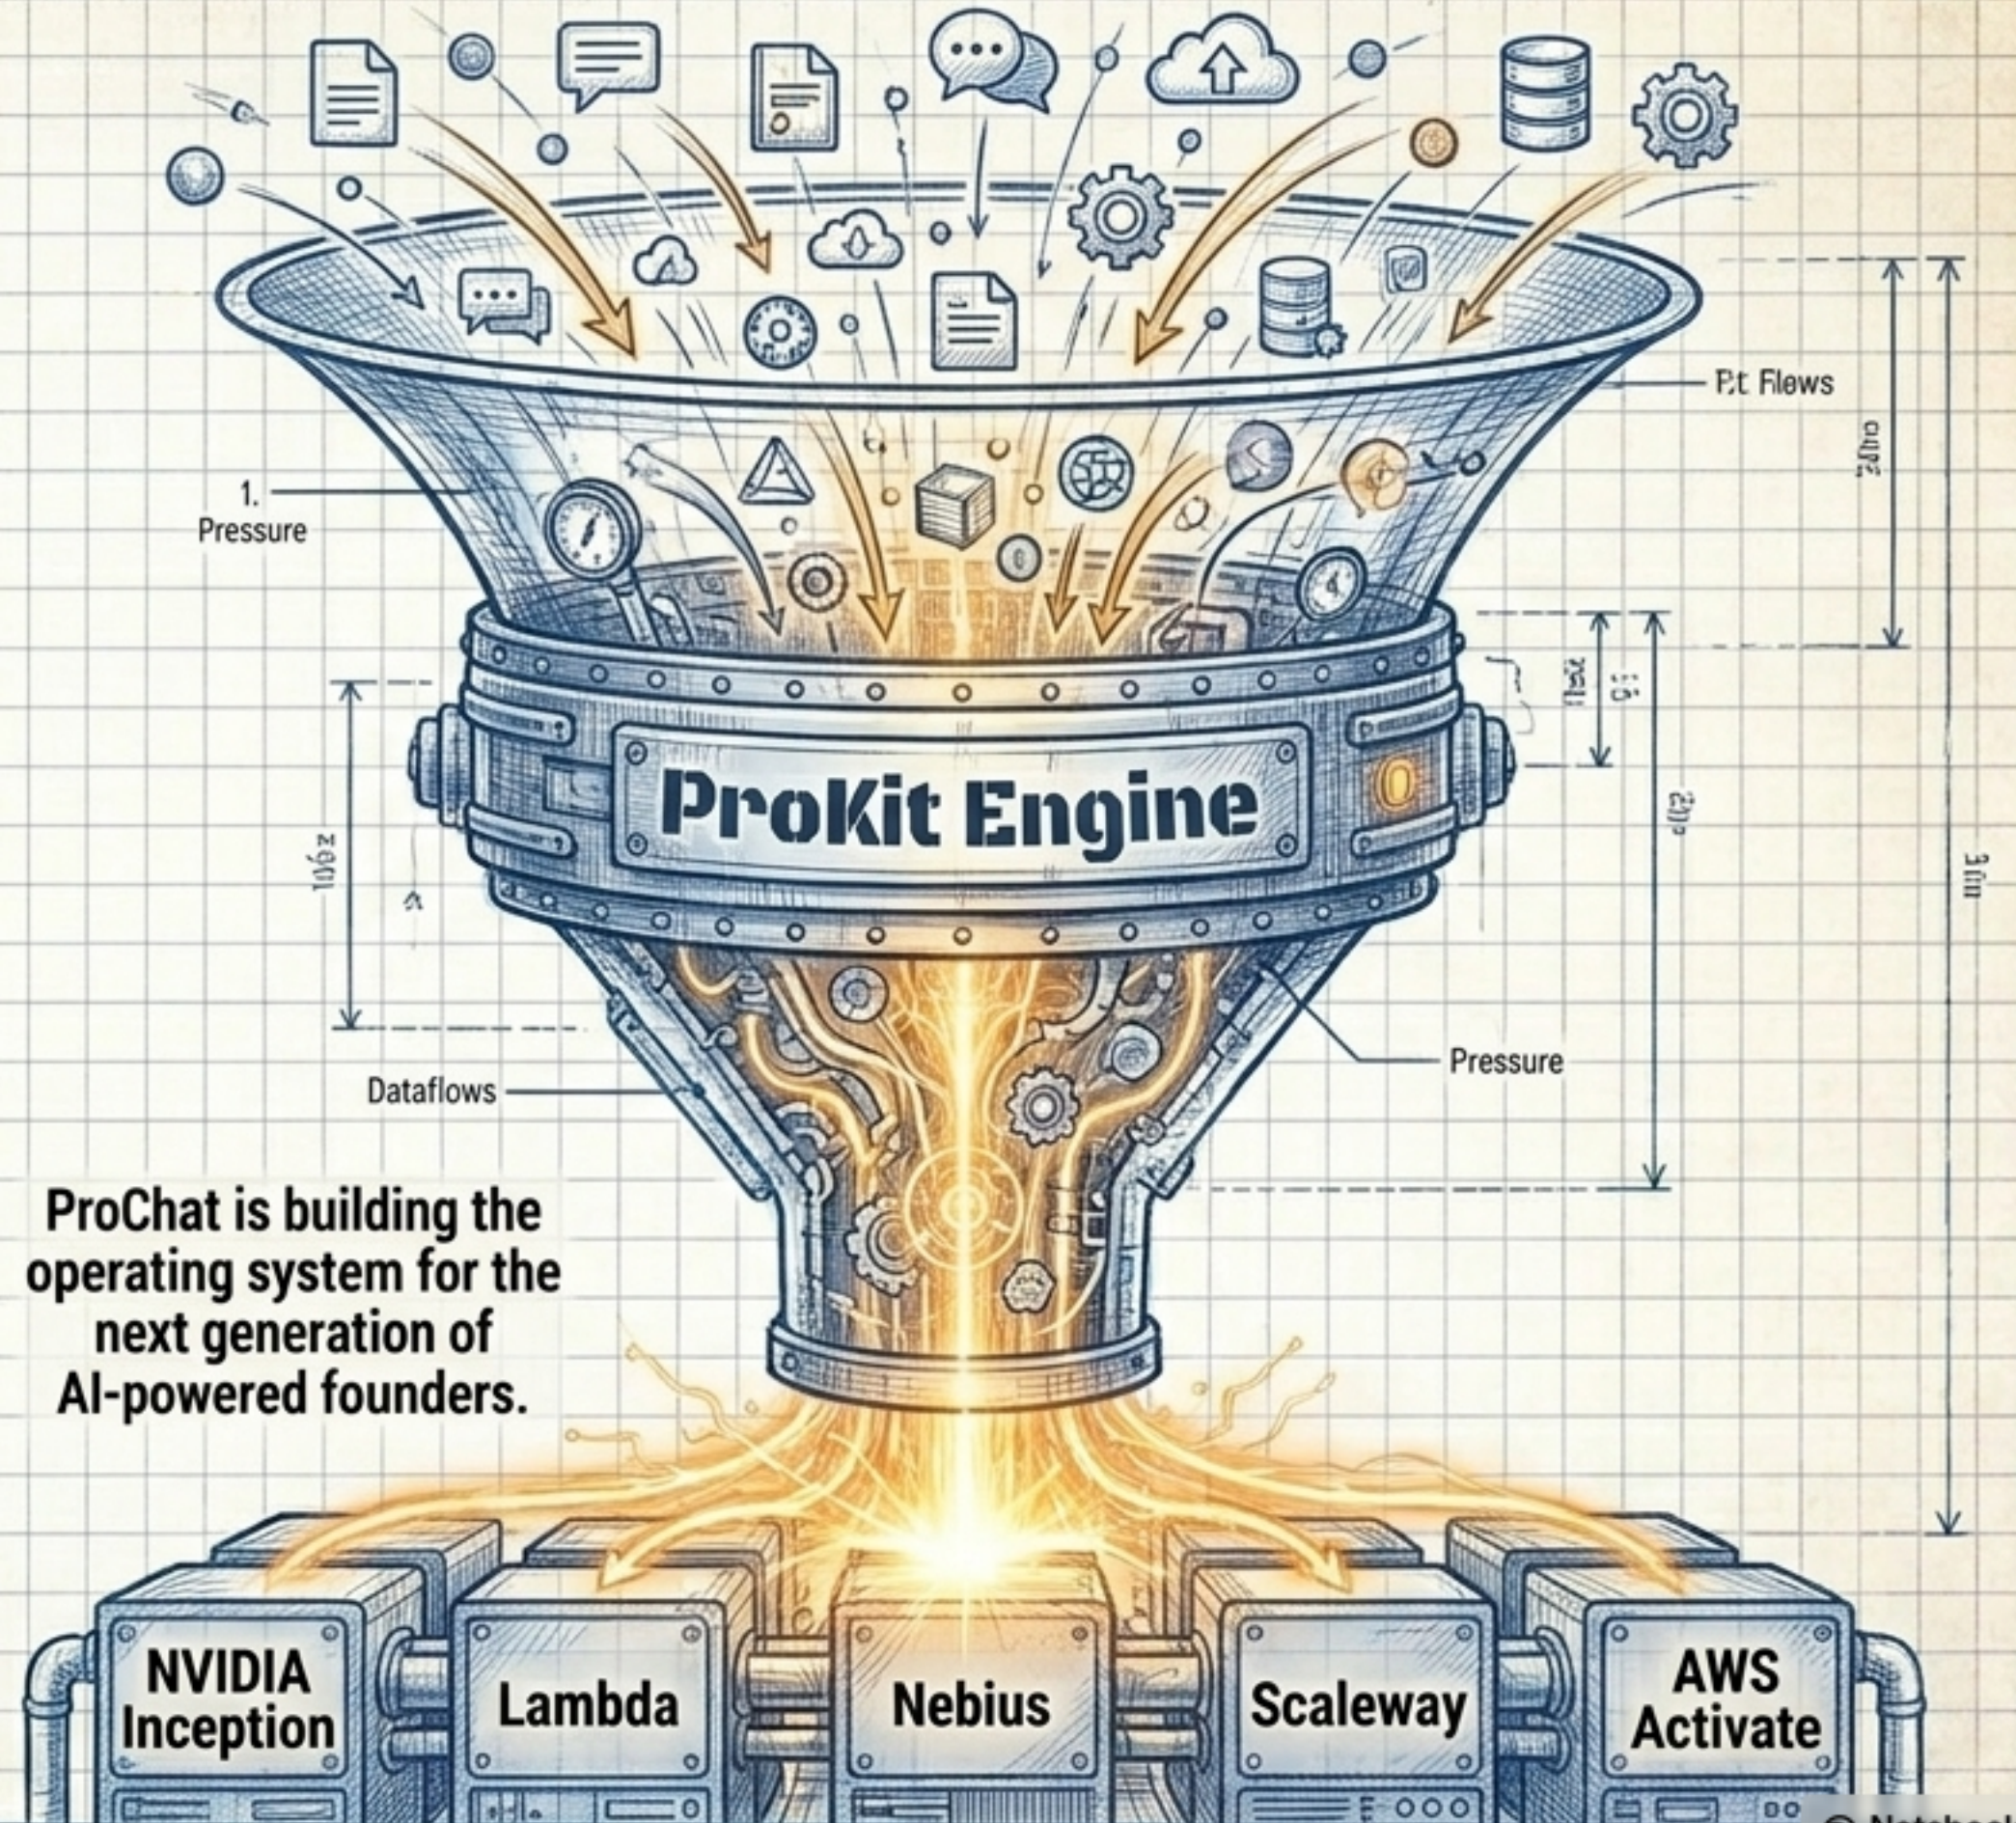

Ask

Seeking strategic infrastructure partnerships (NVIDIA Inception, Lambda, Nebius, Scaleway, AWS Activate).

Goal: Accelerate AI content/video generation, agentic automation, and open-source model experimentation.

By centralising multiple AI-powered products and media-generation workflows onto the ProKit engine, we drive high-density production inference, media processing, transcription, and agentic automation workloads.

ProChat is building the operating system for the next generation of AI-powered founders.
